High zener power in small packages

*Zener diodes with up to 1 W power
dissipation in MiniMELF package*

Additionally to the standard 500 mW zener diode series ZMM Diotec has introduced a new version with enlarged power capability, named ZMD. With up to 1 W in MiniMELF package (SOD-80/DO213AA) these devices can replace larger and more expensive types in MELF package.

**Same power dissipation, less than half the size:
Diotec's ZMD series zener diodes in MiniMELF**

Standard tolerance is +/- 5%, zener voltage ranges from 1 to 100 V according to E24. Other tolerances and higher voltages on request.
