New CD-ROM available!

Contains datasheets, selection guide, cross reference list and company profile

Just in time to this year's "electronica" Diotec presents its new CD-ROM, where the whole product range, from B like Bridge Rectifier to Z like Zenerdiode, can be found.

New are "Protectifiers", i. e. press-fit diodes with TVS-characteristic for the automotive market, SMD zener- und suppressor diodes (TVS), the extension of the product lines to surface mountable packages from SMA to SMC as well as the probably smallest available bridge rectifier for telecom applications.

Beside the complete datasheets the CD-ROM contains a selection guide for quick product overview, a cross reference list for choosing replacement parts as well as a company profile. In proven way the user surface of the CD-ROM is similar to that of Diotec's homepage, thus it enables an easy handling for everyone who already knew Diotec from the Internet. Conversely, the CD can be used for a fast and network-independent overview of Diotec's website.

The CD-ROM can be obtained directly from Diotec or at electronica, hall A6 booth 506.
