Diotec Replacement for discontinued Zener Diodes

In SMD and Through Hole Packages

Diotec continues delivery of zener diodes, which have been either discontinued by competitors or are hard to find. These are the industry's standard ZMM and ZMY in SMD package as well as the axial lead type ZY.

High resolution picture on request, see below

The ZMM in MiniMELF offers up to 500 mW power dissipation, and is available with zener voltage range from 1 V to 100 V, whereas the ZMY is capable up to 1.3 W from 1 V to 200 V. The ZY in plastic package DO-41 finally allows up to 2 W covering the same voltage range from 1 V to 200 V.

This offers a replacement to the user for continuing current projects, there is no need to search for equivalents, homologations can be simplified or aren't necessary at all!

Diotec Semiconductor AG located in Heitersheim/Germany produces and sells semiconductors like diodes, rectifiers, diacs and transistors with more than 30 years experience. **Further informations** are available from Udo Steinebrunner, Tel.: +49-7634-5266-83, Fax: +49-7634-5266-61, Email: u.steinebrunner@diotec.com or on our website <http://www.diotec.com/>.
